

PCHRI2006 – Societal Implications of PHRs

Patricia Flatley Brennan, RN, PhD

Jenna Marquard, MSIE, PhD

Candidate

University of Wisconsin-Madison

October 10, 2006

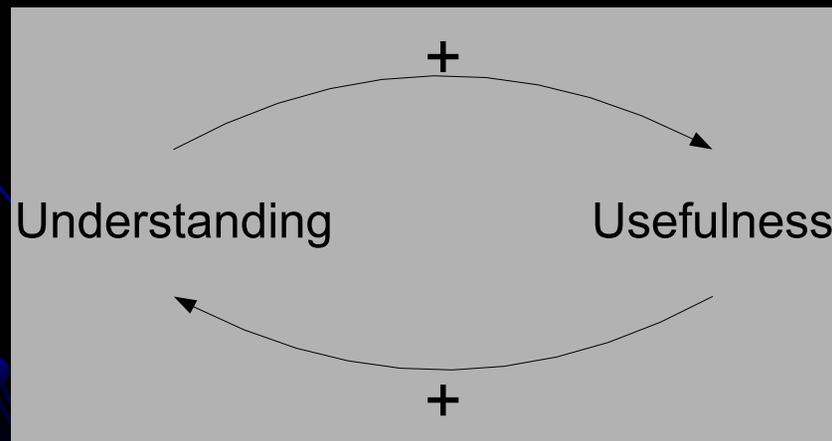

Potential Societal Benefits of PHRs are Significant

- Public health...
- Prevention...
- Chronic disease management...
- Improved self-care...
- Research participation...
- Economics...

These benefits cannot be realized if patients do not use PHRs or use them inappropriately

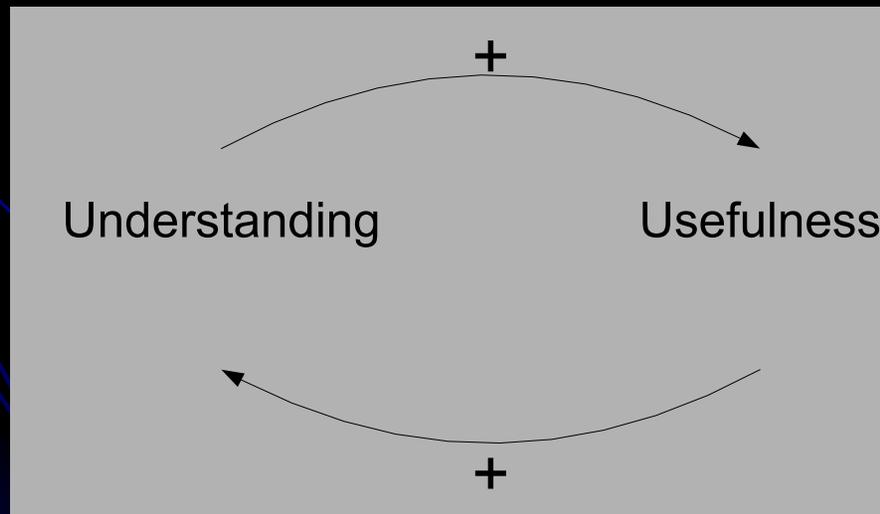

Societal Benefits of PHRs Rest on Two Key Assumptions

- PHR content and control over that content will be *understandable* to patients, especially with personally controlled PHRs
- PHRs will be viewed as *useful* by patients
- These assumptions are likely coupled

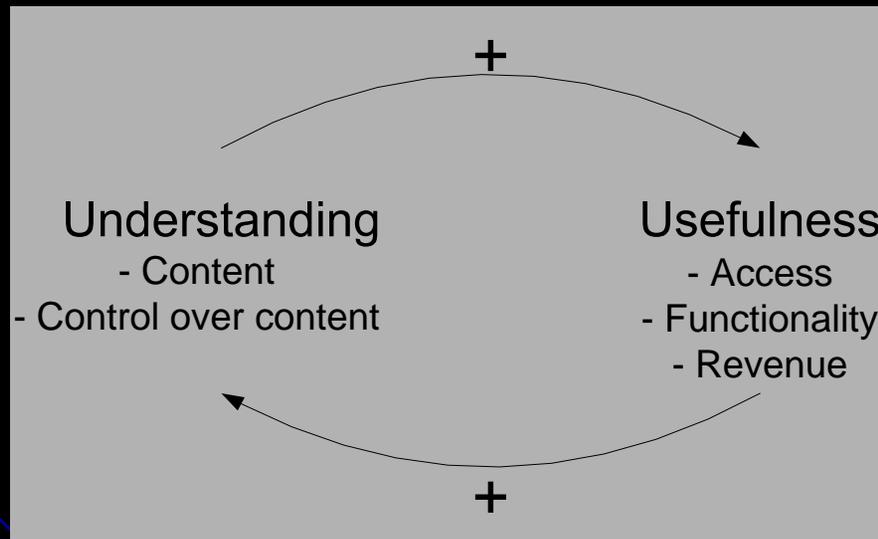

We Must Make PHRs Understandable to Patients

- Understanding PHR content
 - Health literacy levels are low
- Understanding control over PHR content
 - We are unsure how literate patients will be in granting access rights to their records

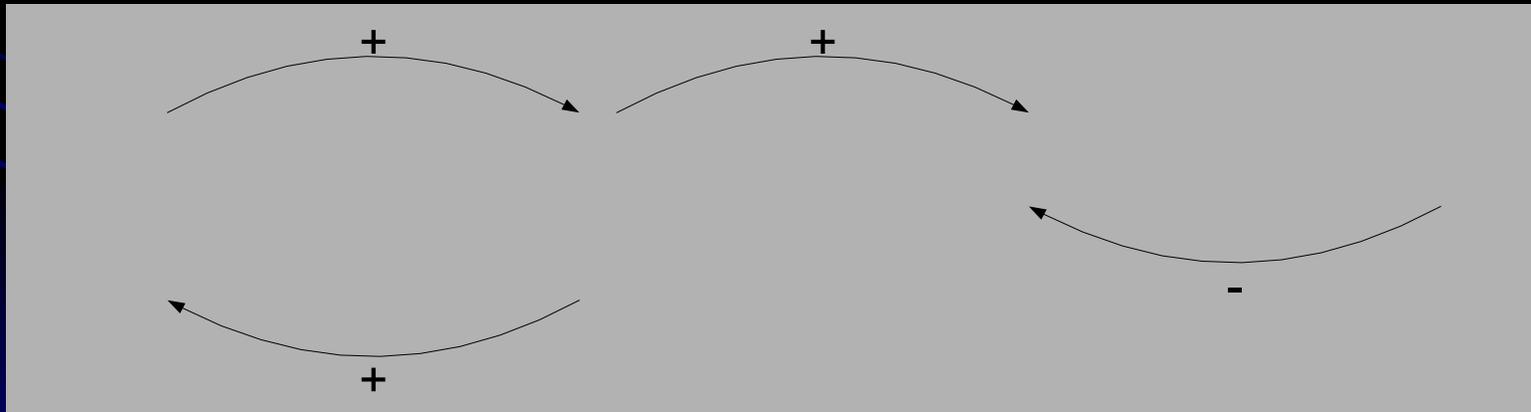

We Must Make PHRs Useful to Patients

- Usefulness is likely to look different for each patient

We Must Make PHRs Useful to Patients

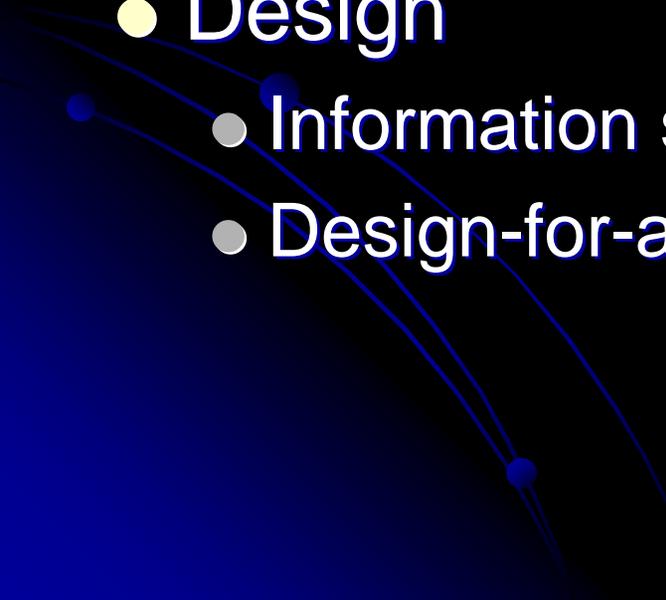

- Demand for PHRs depends on their perceived usefulness by patients
- The 'ideal' PHR, for the individual and society, is one that has high demand

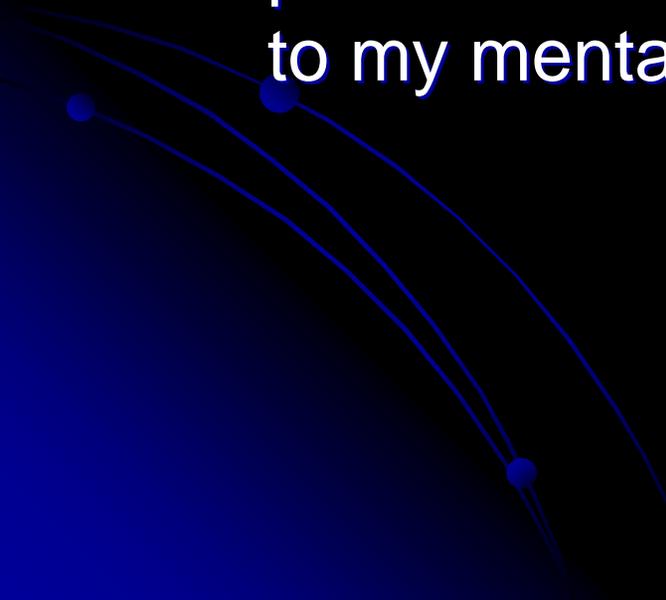

Understanding and Usefulness are Levers for Increasing PHR Demand

- If we increase patient *understanding*, and/or *perceived usefulness* of PHRs, we will likely increase demand for PHRs
- Highly demanded PHRs will likely result in the aforementioned societal benefits
 - Public health...
 - Prevention...
 - Chronic disease management...
 - Improved self-care...
 - Research participation...
 - Economics...

Increasing Patient Understanding of PHR Content

- Language
 - Health Literacy? Health care kindergarten?
 - Tailoring
 - Culture
 - Design
 - Information structure and layout, etc.
 - Design-for-action
- 

Increasing Patient Understanding of Control Over PHR Content

- Individual preferences for privacy/access
 - Solicited through surveys, case examples, stories?
 - Conveying uncertainties in these choices to patients – what might happen if I grant access to my mental health record to Provider X?
- 

Increasing Perceived Usefulness of PHRs

- Information access
 - What can I see, or see more easily, that I couldn't before?
- Functionalities
 - What can I do , or do more easily, with my information that I couldn't do before?
- Revenue generation
 - How can I profit , or profit more easily, from ownership of my information in ways I couldn't before?

Leftovers...

- Integration of the PHR into existing health information management behaviors – **Health@Home**
 - Will what patients demand align with the interest of other stakeholders?
 - How do we deal with this in making infrastructure choices?
-
